Introductions

Diana Kelterborn
Senior Lead Consultant
Ramboll
San Francisco, CA

Kylie McKinley
Lead Consultant
Ramboll
Denver, CO

Alex Liu
ESG Manager
Delta Electronics
Americas
Fremont, CA

Ramboll in brief

- Independent environmental, engineering and design consultancy and provider of management consultancy
- Founded 1945 in Denmark
- 16,500 experts
- Over 225 offices in 35 countries
- Trusted by clients to manage their most challenging environmental, health and social issues as their partner for sustainable change

---

Ramboll Environment & Health has technical expertise in:
- Air Quality
- Compliance Assurance & Performance
- Ecological Services
- **ESG and Sustainability**
- Health Sciences
- Impact Assessment
- Site Solutions
- Transactional Due Diligence
- Waste & Resource Management

Training objectives

Increase familiarity with GHG terms and concepts

Raise awareness of Delta’s GHG targets and reduction initiatives

More efficiently and effectively answer customers’ GHG-related questions

GHG Basics

-Climate Change

-GHG Regulations

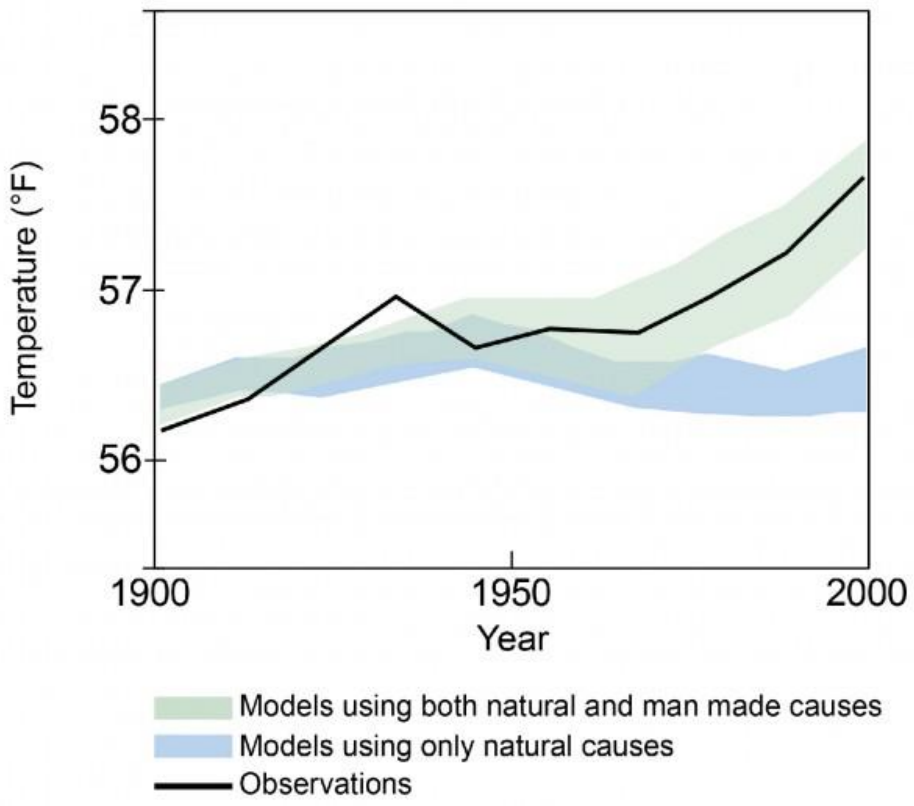
-Protocols and Standards

-Types of GHGs

-Emissions Scopes and Categories

-Calculating Emissions

Climate change impacts: more heat is coming in than going out, causing changes to the climate



Human-related activities, such as burning fossil fuels, are a major source of GHGs

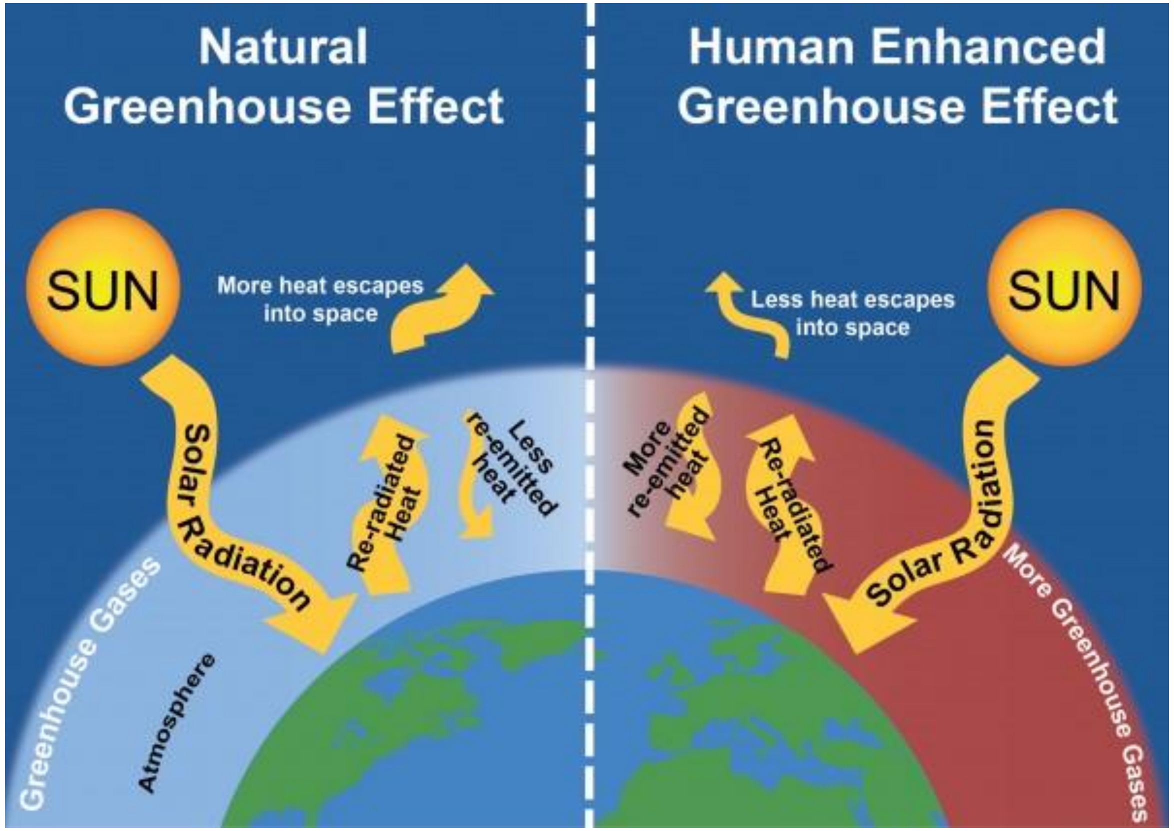
Average global surface **temperature has increased** since pre-industrial times

Increased temperatures have led to **climate changes**, including higher temperatures, more frequent and extreme precipitation events, rising sea levels, decreased snow cover, and alterations to biological systems

Source: Center for Sustainable Systems, University of Michigan. 2021. "Climate Change: Science and Impacts Factsheet." Pub. No. CSS05-19.

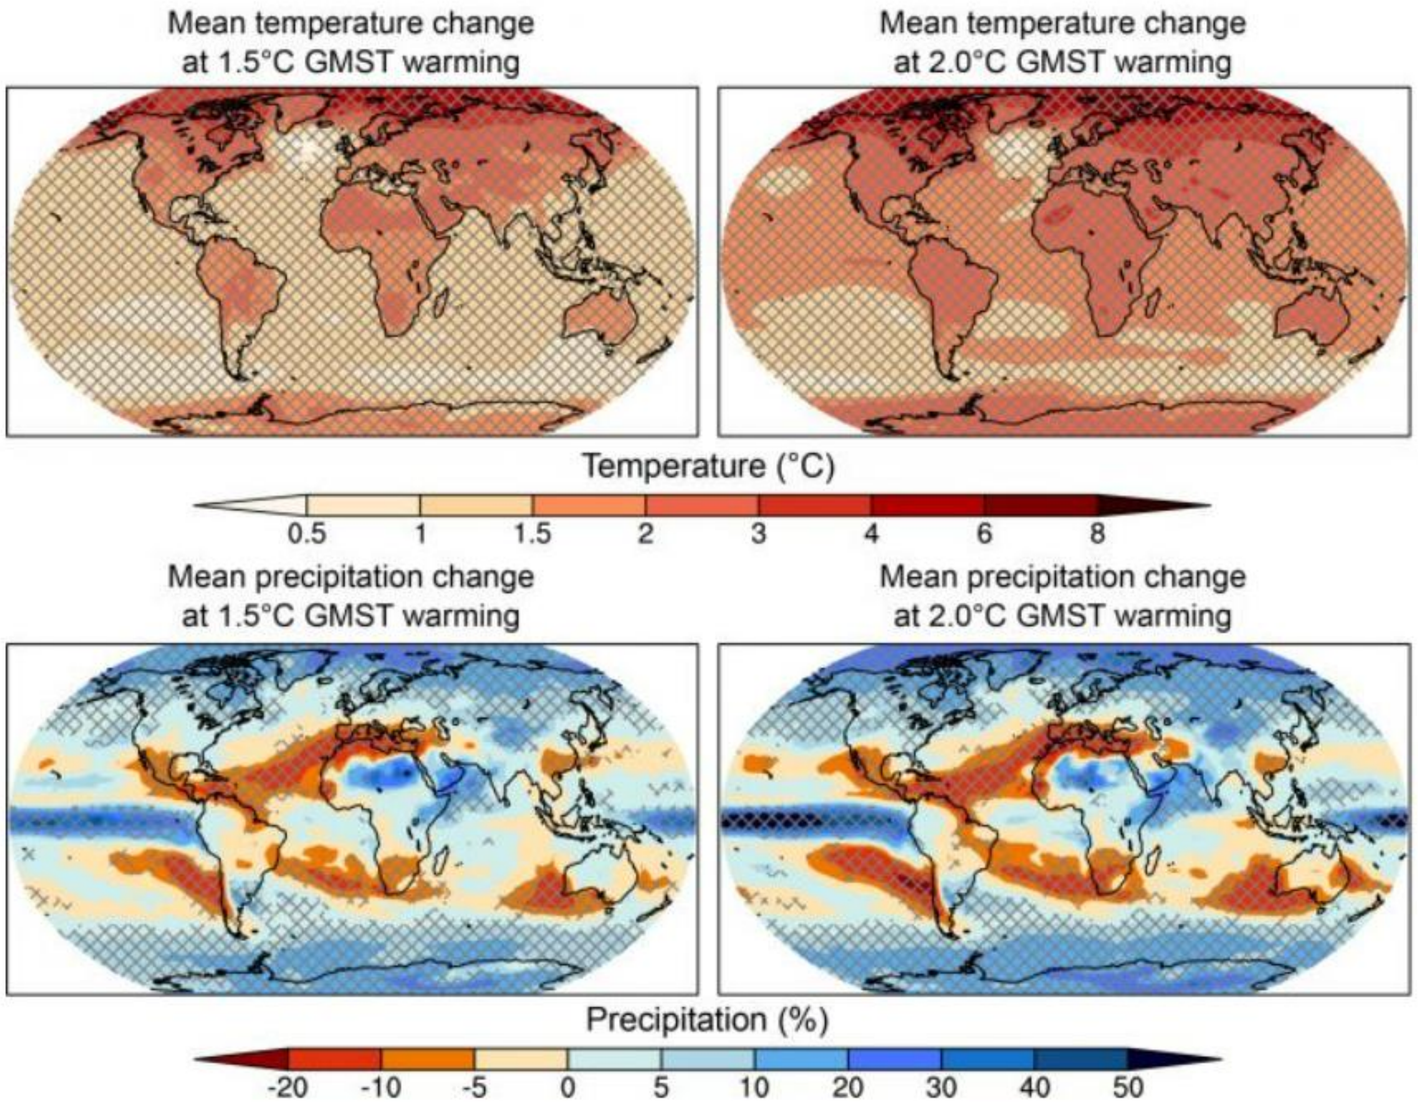
Greenhouse effect: greenhouse gases (GHGs) trap heat resulting in positive radiative forcing

<u>Positive radiative forcing</u> means that more solar energy is absorbed by the Earth than escapes back into space, and results in increased temperatures on Earth’s surface



Source: Center for Sustainable Systems, University of Michigan. 2021. "Climate Change: Science and Impacts Factsheet." Pub. No. CSS05-19.

Limiting warming to Paris Agreement aligned 1.5°C to avoid the most severe and irreversible impacts of climate change



Source (including figure): IPCC, 2018: Summary for Policymakers. In: Global Warming of 1.5°C. An IPCC Special Report on the impacts of global warming of 1.5°C above pre-industrial levels and related global greenhouse gas emission pathways, in the context of strengthening the global response to the threat of climate change, sustainable development, and efforts to eradicate poverty [Masson-Delmotte, V., P. Zhai, H.-O. Pörtner, D. Roberts, J. Skea, P.R. Shukla, A. Pirani, W. Moufouma-Okia, C. Péan, R. Pidcock, S. Connors, J.B.R. Matthews, Y. Chen, X. Zhou, M.I. Gomis, E. Lonnoy, T. Maycock, M. Tignor, and T. Waterfield (eds.)]. Cambridge University Press, Cambridge, UK and New York, NY, USA, pp. 3-24. https://doi.org/10.1017/9781009157940.001.

Regulatory impacts - mandatory reporting requirements

United States

Governing Body	Regulation	Coverage
United States Environmental Protection Agency (USEPA)	Greenhouse Gas Reporting Program (GHGRP)	United States • Large GHG emission sources • Fuel and industrial gas suppliers • CO2 injection sites > 25,000 metric tons CO2e
California Air Resources Board (CARB)	Regulation for the Mandatory Reporting of Greenhouse Gas Emissions (MRR) Senate Bill 253	California • Electricity generators • Industrial facilities • Fuel suppliers • Electricity importers • Companies with annual revenues > $1 Billion > 10,000 metric tons CO2e
US Securities and Exchange Commission (SEC)	The Enhancement and Standardization of Climate-Related Disclosures for Investors Final Rule	United States • All SEC registrants including foreign private issuers No minimum emissions threshold

Regulatory impacts - mandatory reporting requirements

Canada and Mexico

Governing Body	Regulation	Coverage
Environment Canada	[Greenhouse Gas Reporting Program (GHGRP)]	Canada • All facilities, with additional requirements for a subset of sectors >10,000 metric tons CO2e
Secretariat of Environment and Natural Resources (Secretaría de Medio Ambiente y Recursos Naturales, SEMARNAT)	[Regulation of the General Law for Climate Change (RGLCC)]	Mexico >25,000 metric tons CO2e

Regulatory impacts - mandatory reporting requirements
Europe

Governing Body	Regulation	Coverage
European Union (EU)	Corporate Sustainability Reporting Directive (CSRD)	EU Businesses • At least EUR 450,000 in total assets • At least EUR 900,000 in net turnover (revenue) • At least 10 employees (average) throughout the year • EUR 50 million in net turnover • EUR 25 million in assets • 250 or more employees Non-EU companies • Net turnover of above EUR 150 million in the EU will also have to comply • EU-based subsidiary with securities listed on an EU-regulated market exchange • An EU branch office with at least EUR 40 million in net turnover

Regulatory impacts - mandatory reporting requirements

Taiwan

Governing Body	Regulation	Coverage
Taiwan's Financial Supervisory Commission	International Financial Reporting Standard S1 General Requirements for Disclosure of Sustainability-related Financial Information	Taiwan Phase-in approach: • Phase I: > NT$ 10 bn report by FY26 • Phase II: >NT $5 bn < $NTbn report by FY27

Regulatory impacts - mandatory reporting requirements

South America

Governing Body	Regulation	Coverage
Argentina	No mandatory reporting[1]	N/A
Brazil	No mandatory reporting, voluntary Brazil GHG Protocol Program	N/A
Colombia	No mandatory reporting	N/A
Peru	No mandatory reporting	N/A

[1] Guthrie, L. and Blower, L. (2017) “Corporate Climate Disclosure Schemes in G20 Countries after COP21.” Climate Disclosure Standards Board (CDSB). Retrieved from https://www.oecd.org/environment/cc/g20-climate/collapsecontents/Climate-Disclosure-Standards-Board-climate-disclosure.pdf

Greenhouse gases

Required GHGs

7 different greenhouse gases regulated by the UNFCCC/Kyoto Protocol[1]

- Methane (CH_4)
- Carbon Dioxide (CO_2)
- Nitrous Oxide (N_2O)
- Perfluoro-carbons (PFCs)
- Nitrogen Triflouride (NF_3)
- Sulphur Hexafluoride (SF_6)
- Hydro-fluorocarbons (HFCs)

Optional GHGs

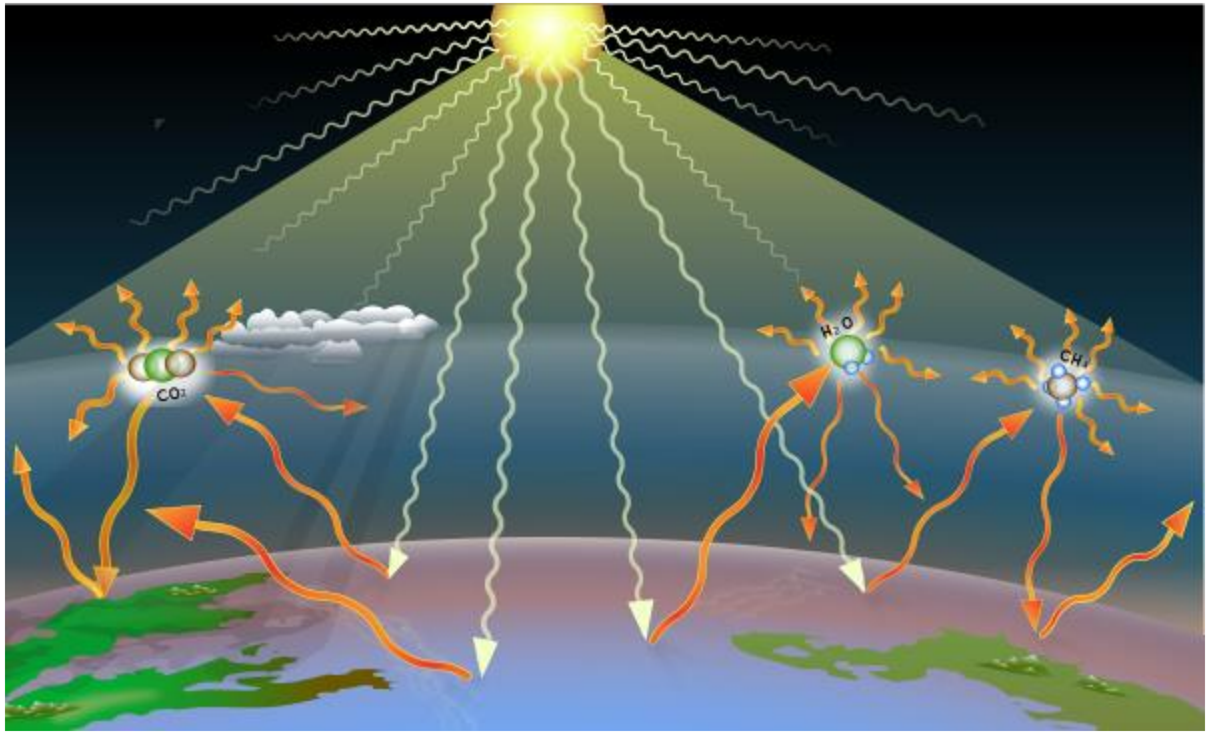
Reported when relevant to company's value chain, including those regulated by the Montreal Protocol

- Hydrochloro fluorocarbons (HCFCs)
- Carbon tetrachloride (CCl_4)

[1]Nitrogen trifluoride (NF3) was added for the Second Commitment Period of the Kyoto Protocol.

Global warming potential (GWP)

- Amount of energy 1 ton of a GHG will absorb over a given period of time, relative to 1 ton of CO_2
- Each greenhouse gas has different molecular structure, which relates to global warming potential by affecting:
  - Amount of energy absorbed
  - Lifetime in the atmosphere
- GWP is defined for a given timescale - 100 years is the most common
  - 20-year GWPs are also available, though used less



Source: United States Environmental Protection Agency. (2022). Understanding global warming potentials. https://www.epa.gov/ghgemissions/understanding-global-warming-potentials

Values of global warming potential

GWP values are determined by the Intergovernmental Panel on Climate Change, which reviews and compiles the most up-to-date research on climate change every 5 years.

Values shown are from the 6th Assessment Report (AR6). This is important to be aware of when calculating emissions, as some sources may reference AR4 or AR5.

Greenhouse Gas	AR6 GWP-100
CO_2	1
CH_4	27.9
N_2O	273
HFCs (e.g., HFC-23)	14,600
PFCs (e.g., PFC-14)	7,380
SF_6	24,300

Source: Intergovernmental Panel on Climate Change, Sixth Assessment Report, IPCC AR6, https://www.ipcc.ch/report/ar6/wg1/downloads/report/IPCC_AR6_WGI_Chapter07_SM.pdf

What GHG accounting means

Greenhouse gas (GHG) accounting, or carbon accounting, is a process used to measure how much carbon dioxide equivalents (CO2e) an organization emits

1 Greenhouse gas emissions are tracked

- Methane (CH_4)
- Sulphur Hexafluoride (SF_6)
- Carbon Dioxide (CO_2)
- Perfluorocarbons (PFCs)
- Nitrogen Triflouride (NF_3)
- Nitrous Oxide (N_2O)
- Hydrofluorocarbons (HFCs)

2 All gases are converted to CO_2e using a greenhouse warming potential (GWP)

× GWP =

3 CO_2e is the common unit for measuring Greenhouse Gases

Carbon Dioxide Equivalent (CO_2e)

Protocols, disclosure platforms, standards, and frameworks

Protocol

GREENHOUSE GAS PROTOCOL

- Emerged from a partnership between the World Resources Institute (WRI) and the World Business Council for Sustainable Development (WBCSD).
- Covers emissions from private and public sector operations, value chains, and mitigation actions
- More than 90% of Fortune 500 Companies reporting to CDP use the GHG Protocol, including Delta.

Disclosure Platform

CDP
DISCLOSURE INSIGHT ACTION

- CDP (formerly Climate Disclosure Project) encourages business to voluntarily report annually on various climate, supply chain, and environmental indicators.
- Focuses on GHG emissions, plastics, climate change, deforestation, and water securities.
- Operates in roughly 90 countries and over 23,000 companies report to CDP, including Delta.

Standard

SCIENCE BASED TARGETS
DRIVING AMBITIOUS CORPORATE CLIMATE ACTION

- Defines and promotes best practice in emissions reductions and net-zero targets in line with climate science.
- Provides technical assistance and expert resources to companies who set science-based targets in line with the latest climate science.
- Brings together a team of experts to provide companies with independent assessment and validation of targets.
- Delta has set SBT-approved targets.

Frameworks

SASB GRI ISSB
TCFD TASK FORCE ON CLIMATE-RELATED FINANCIAL DISCLOSURES

- There are many other frameworks for ESG reporting which include disclosure of GHG emissions.
- Delta’s reporting aligns with Sustainability Accounting Standards Board (SASB), Global Reporting Initiative (GRI), and the Task Force on Climate-Related Financial Disclosures (TCFD).
- As of 2024, the International Sustainability Standards Board (ISSB) took over the responsibility of TCFD, GRI, and SASB.

Verification standard - ISO 14064

Overseeing bodies

- International Standards Organization (ISO)

Purpose

- Provides organizations with tools and resources for calculating, verifying, reporting, and managing emissions
- Supports both regulated and voluntary programs (e.g., emission trading, public reporting)

When to use

- Corporate GHG reporting (e.g., via annual sustainability report or disclosure framework such as CDP)

Relation to GHG Protocol

- ISO establishes minimum standards for compliance with GHG Protocol best practices

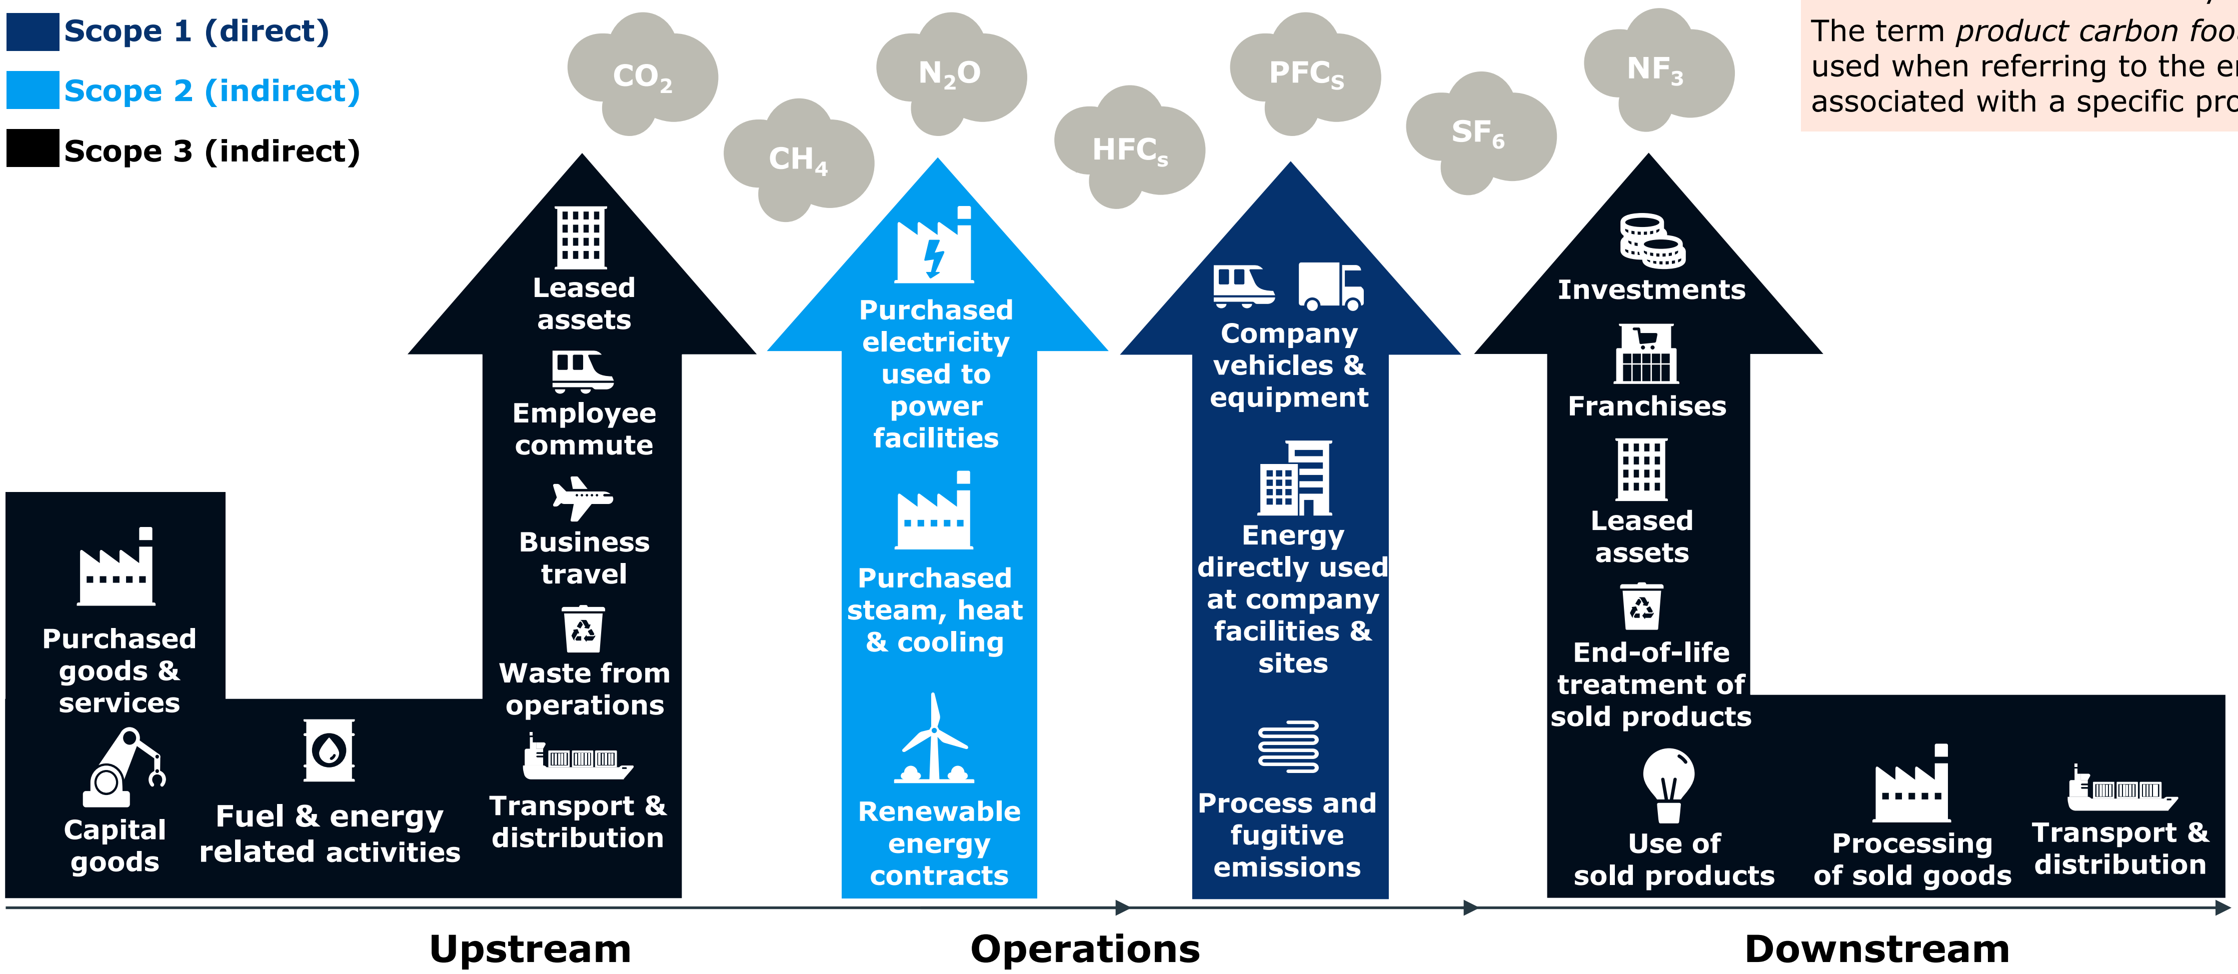
What is an organization's carbon footprint?

Terminology Note:

The term ***carbon footprint*** can be used for organizations and for products. This can be confusing.

Here the term *carbon footprint* refers to an organization's GHG emissions also called a GHG inventory.

The term *product carbon footprint* is used when referring to the emissions associated with a specific product.



Almost all of Delta's sustainability efforts (including RE100, EV100, ICP, energy conservation, etc.) are to reduce GHG emissions.

Scopes 1, 2, and 3 cover all emissions produced by a company

Emissions scopes align with ease or ability to influence or reduce those emissions

Scope 1

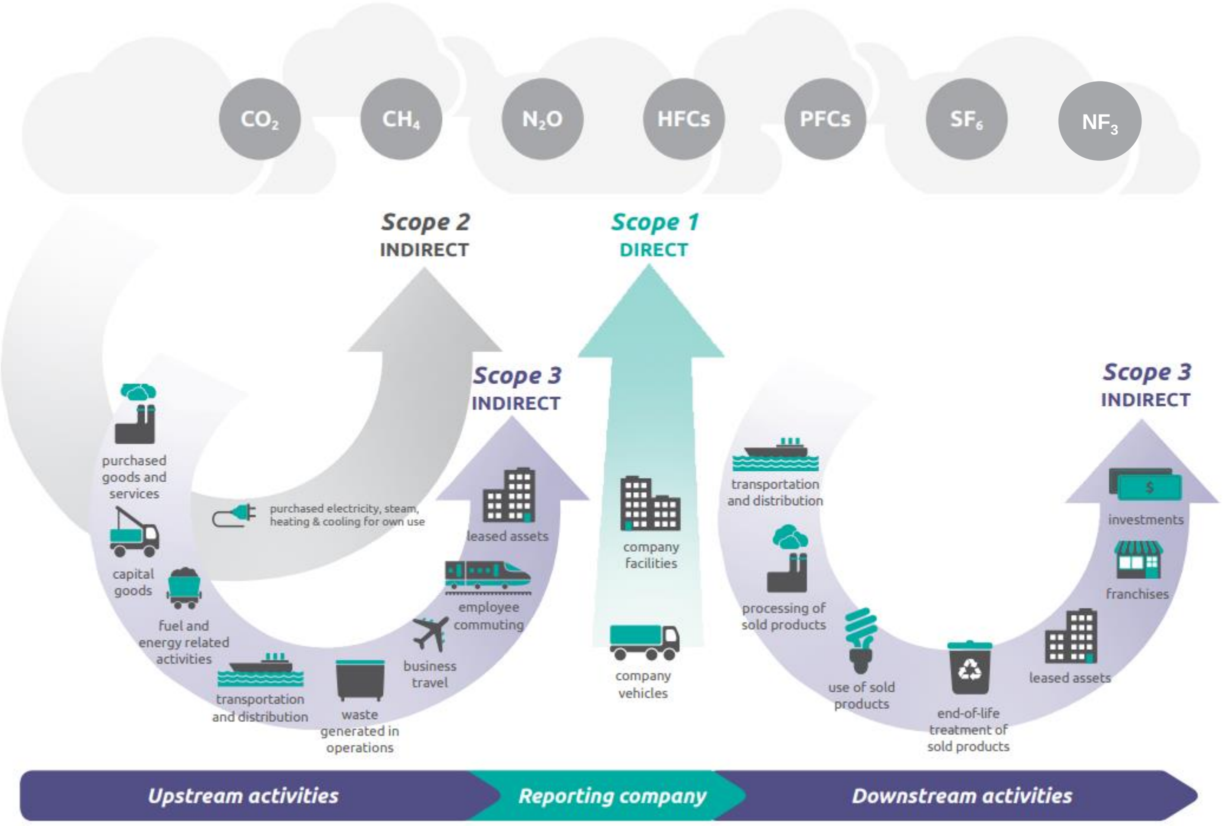
Direct greenhouse gas (GHG) emissions that occur from sources **that are controlled or owned** by an organization.

Scope 2

Indirect GHG emissions associated with the organization's **energy use** (the purchase of electricity, steam, heat, or cooling).

Scope 3

Indirect emissions resulting from activities from assets **not owned or controlled** by the organization but contained in **their value chain** (upstream or downstream activities).



Source: "Scope 1 and 2 Inventory Guidance." EPA. Accessed 2/8/22. "Scope 3 Inventory Guidance." EPA. Accessed 2/8/22."Corporate Value Chain (Scope 3) Accounting and Reporting Standard." GHG Protocol.

Examples of emissions sources

The list below represents some typical emission sources in each scope

Scope 1

- Company fleets, including assets like maintenance or delivery vans or trucks, corporate cars or jets, forklifts and other heavy equipment, etc.
- Natural gas usage in furnaces, hot water heaters and appliances
- On site generation of electricity, such as solar panels, hydroelectric dams, generators, etc.

Scope 2

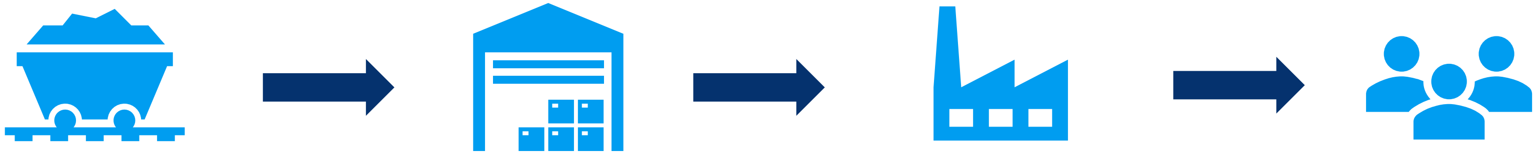
- Purchased electricity generated from sources off site, such as coal or nuclear power plants, solar or wind farms, etc.
- Steam or hot/chilled water purchased and used for heating and cooling

Scope 3

- Employee commuting to an office
- Business travel outside of normal commuting
- Purchased goods and services, such as office or maintenance equipment
- Waste generation onsite, leading to landfill emissions or incineration emissions
- Use of sold products by consumers
- Investments

Emissions reporting overlaps along the supply chain

A company’s scope 1 and 2 emissions are another company’s scope 3 emissions.



Supply Chain Steps / **Emissions Reporting Entity**	**Raw Material**	**Supplier**	**Manufacturer**	**End Customer**
Manufacturer	Scope 3 Category 1	Scope 3 Category 1	Scope 1&2	Scope 3 Category 11
End Customer	Scope 3 Category 1	Scope 3 Category 1	Scope 3 Category 1	Scope 1&2

Emission scopes for Delta and its customers

- Emissions are reported in different scopes throughout the supply chain.
- Delta's scope 1 and 2 emissions impact customers' scope 3 emissions.
- Customer's scope 1 and 2 emissions impact Delta's scope 3 emissions.

Supplier's Scope 1 &2
(Raw material extraction)

Delta's Scope 3
Category 1
(Purchased goods)

Customer's Scope 3
(Category 1 – Purchased Goods and Services)

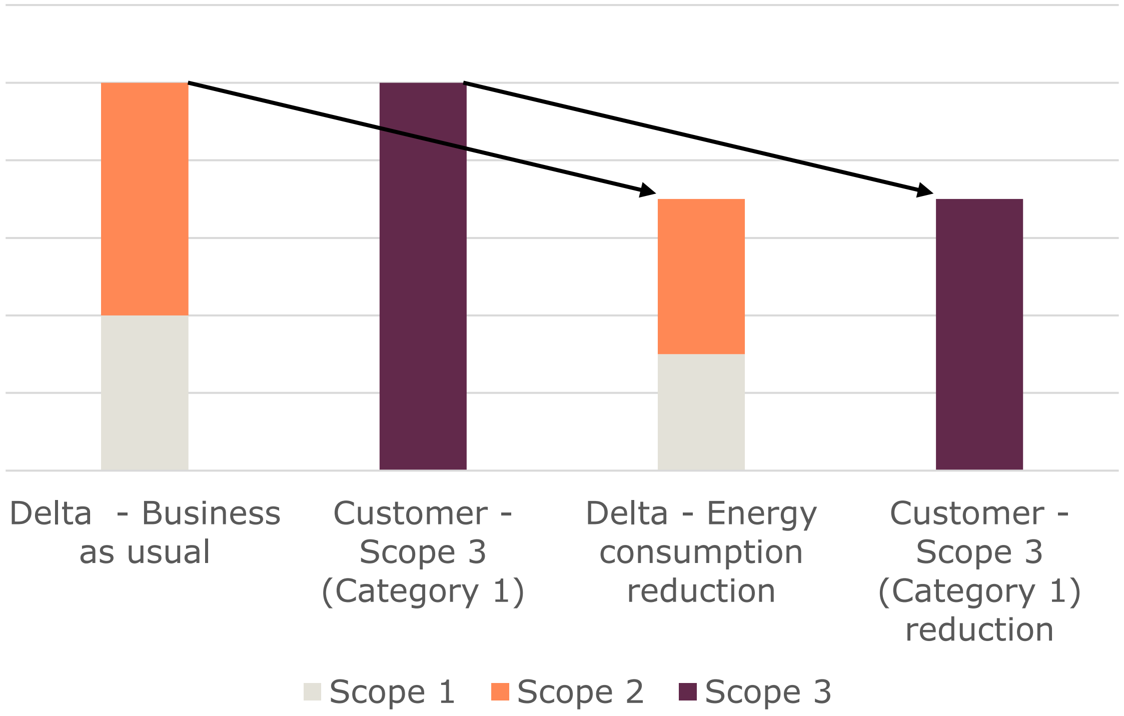
Delta's Scope 1 & 2
(Natural gas combustion and purchased electricity)

Customer's Scope 1 & 2
(Use of Delta's products)

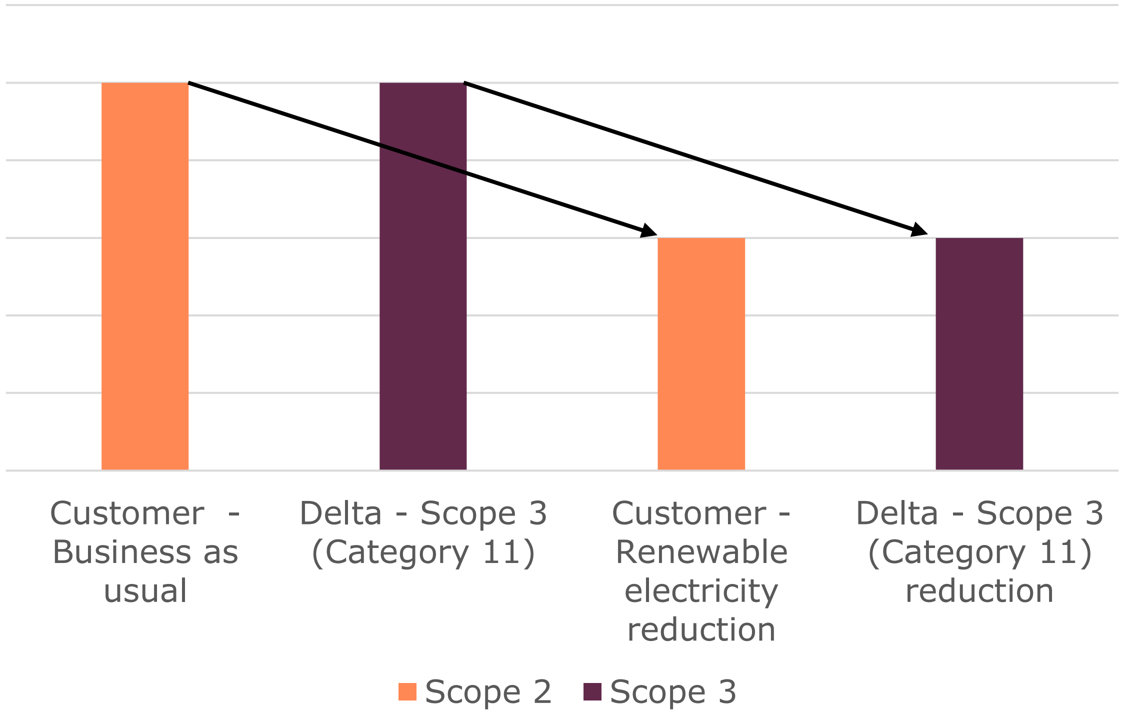
Delta's Scope 3
Category 11
(Use of products)

Examples – emissions scopes for Delta and its customers

- Delta implements energy efficiency measures to reduce its Scope 1 and 2 emissions. These efforts would reduce Customer's Scope 3 (Category 1 – Purchased Goods & Services) emissions.



- Customer sources renewable electricity to reduce its Scope 2 emissions. These efforts would reduce Delta's Scope 3 (Category 11 – Use of Sold Products) emissions.



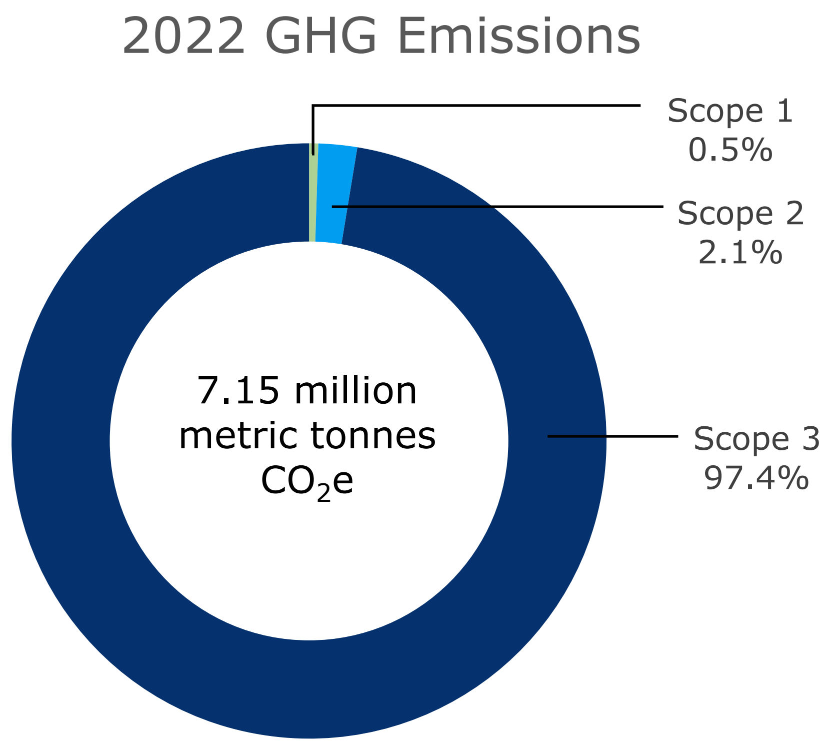
Questions?

Delta’s Decarbonization Activities

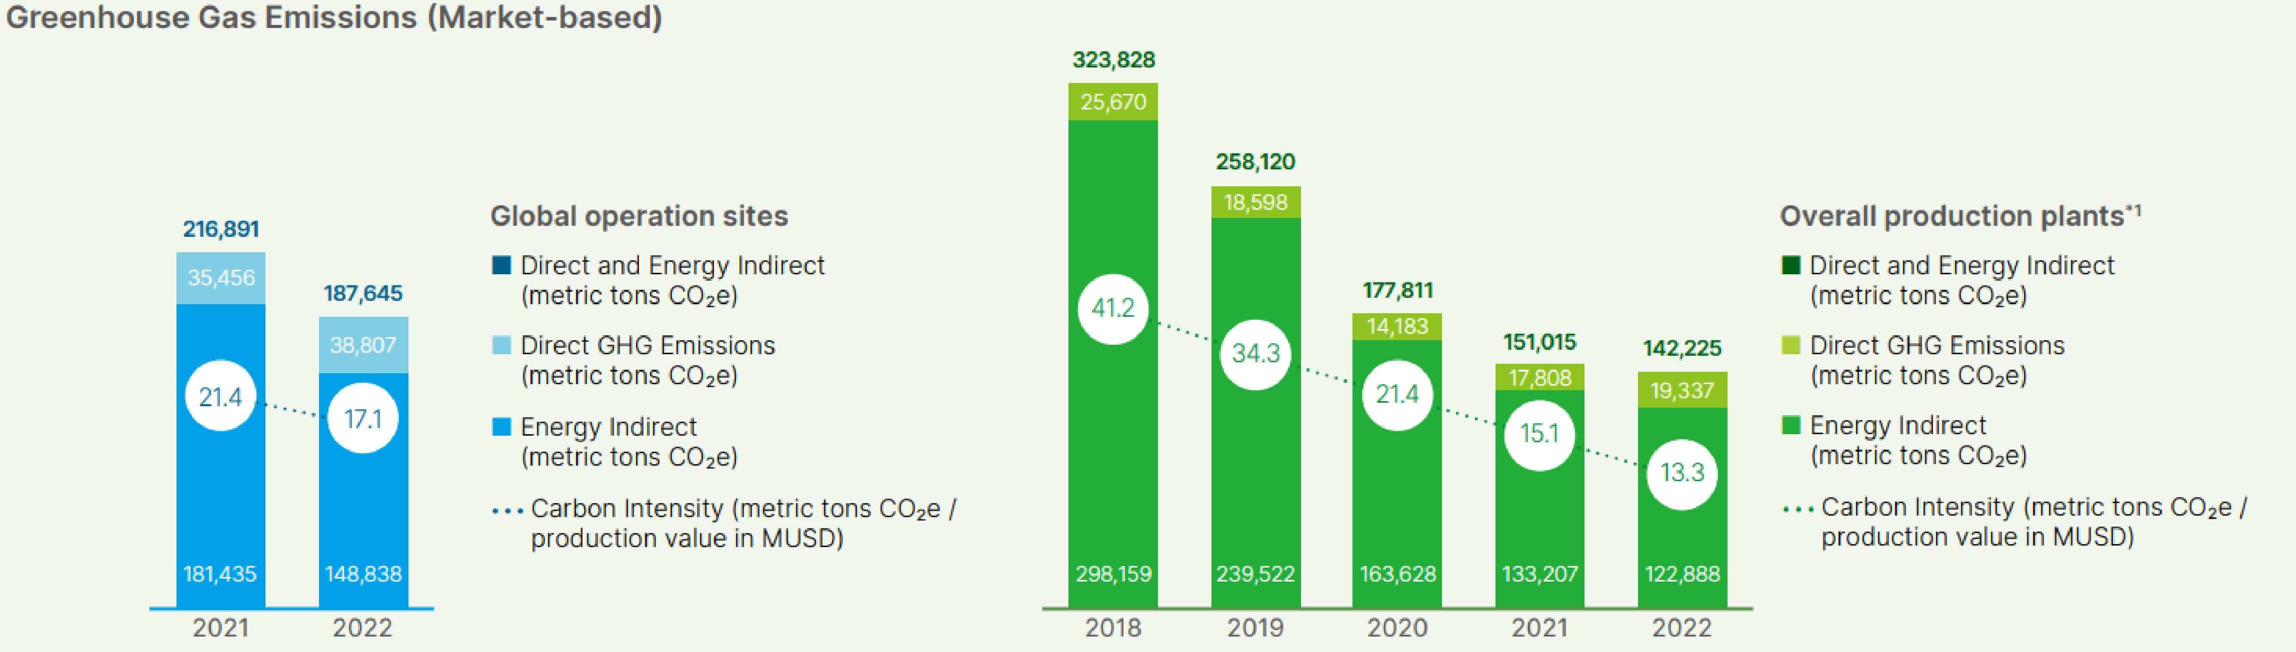
-GHG Emissions Inventory
-Delta’s Climate and GHG Targets
-Reduction Initiatives

Delta's GHG emissions inventory

Scope 3 emissions are the vast majority of Delta's GHG emissions inventory.



Delta's scope 1 and 2 emissions



*1.Overall production plants: Dongguan, Wujiang, Wuhu, and Chenzhou Plants in Mainland China; DET plant 1, 3, 5, and 6; Taoyuan plant 1 and 2 in Taiwan; Cyntec Hsinchu, Huafeng, and Wuhu plants; and the production plants of Eltek acquired after 2015 (plants in the United States and India).

*2.In 2021, plants of Eltek in the United States and India were removed due to product line adjustments and we added Taoyuan Plant 5 and Pingzhen Plant.

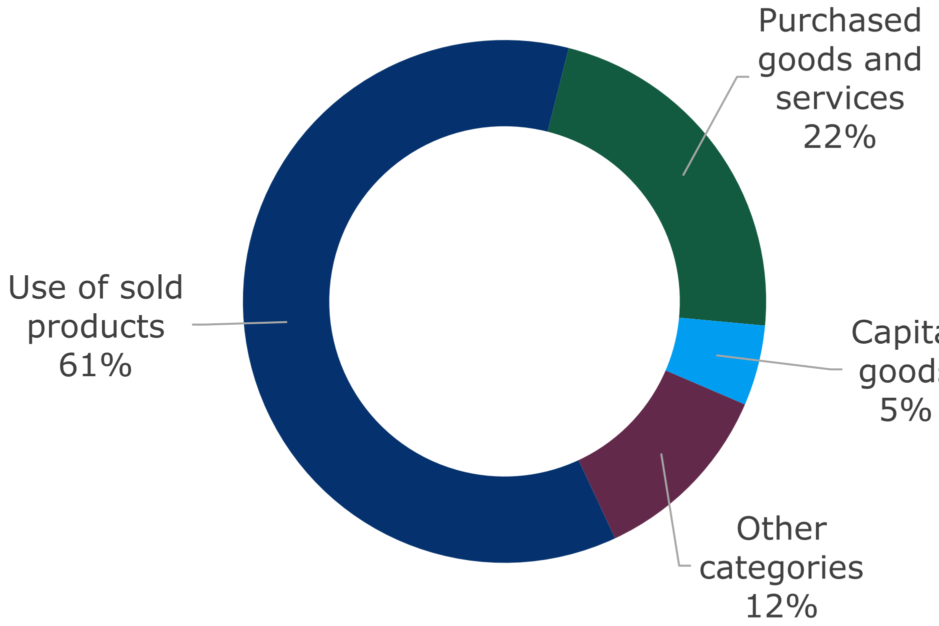
Source: Delta Electronics 2022 ESG Report.

Delta’s scope 3 emissions

Other Indirect Greenhouse Gas Emissions

Unit: metric tons CO_2e

	Scope 3 Category	Emissions in 2022
Category 1~8	Purchased Goods and Services	1,568,772.62
	Capital goods	346,435.89
	Fuel- and Energy-related activities Not Included in Scope 1 or Scope 2	51,990.43
	Upstream transportation & distribution	177,397.56
	Waste generated in operation	7,223.53
	Business travel	4,827.10
	Employee commuting	76,262.03
	Upstream leased assets	18.75
Category 9~15	Downstream transportation & distribution	151,809.80
	Processing of sold products	48,602.60
	Use of sold products	4,240,197.05
	End-of-Life treatment of sold products	176,356.63
	Downstream leased assets	4,127.84
	Franchises	N/A
	Investments	109,269.85



Delta’s scope 3 emissions reduction efforts focus on:

- Category 1: We will engage with our supply chain to prioritize procuring low carbon materials.
- Category 11: We will engage/encourage customers to use renewable energy.

Source: Delta Electronics 2022 ESG Report.

Delta's Science Based Targets

Delta Electronics Inc. is the first of the industrial sector to have a verified SBTi target in Taiwan.

The company commits to reach net zero across the value chain by 2050 from a 2021 base year.

By 2030…

- reduce absolute scope 1 and 2 GHG emissions 90%
- Increase annual sourcing of renewable electricity from 55% to 100%
- Reduce absolute scope 3 emissions 25%

By 2050…

- Maintain 90% scope 1 and 2 reductions
- Reduce absolute scope 3 emissions by 90%

SCIENCE BASED TARGETS

DRIVING AMBITIOUS CORPORATE CLIMATE ACTION

About the Science Based Targets Initiative (SBTi)

- Defines and promotes best practice in emissions reductions and net-zero targets in line with climate science.
- Provides technical assistance and expert resources to companies who set science-based targets in line with the latest climate science.
- Brings together a team of experts to provide companies with independent assessment and validation of targets.

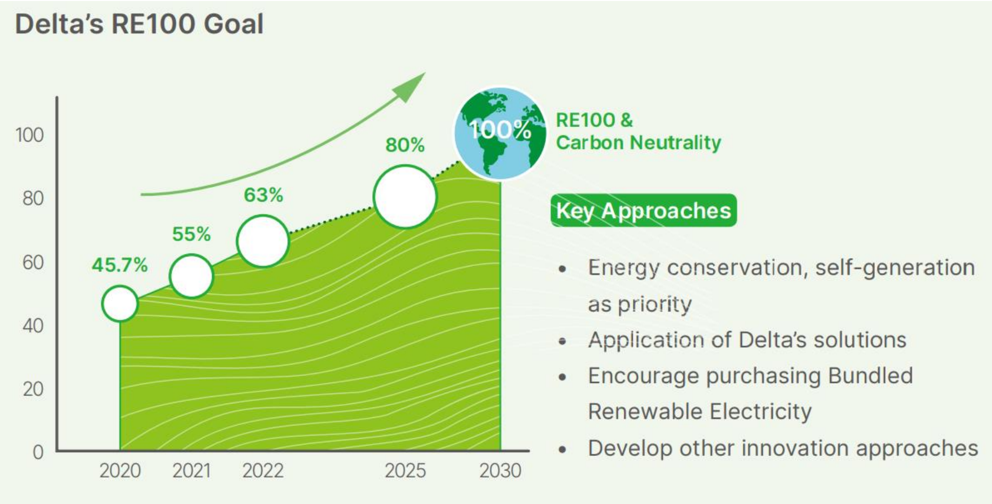
Source: "About Us." SBTi, December 2022

Additional external targets

These programs support decarbonization which impacts the emissions of both Delta and its supply chain.

CLIMATE GROUP
RE100

- 100% use of renewable electricity at global business locations by 2030

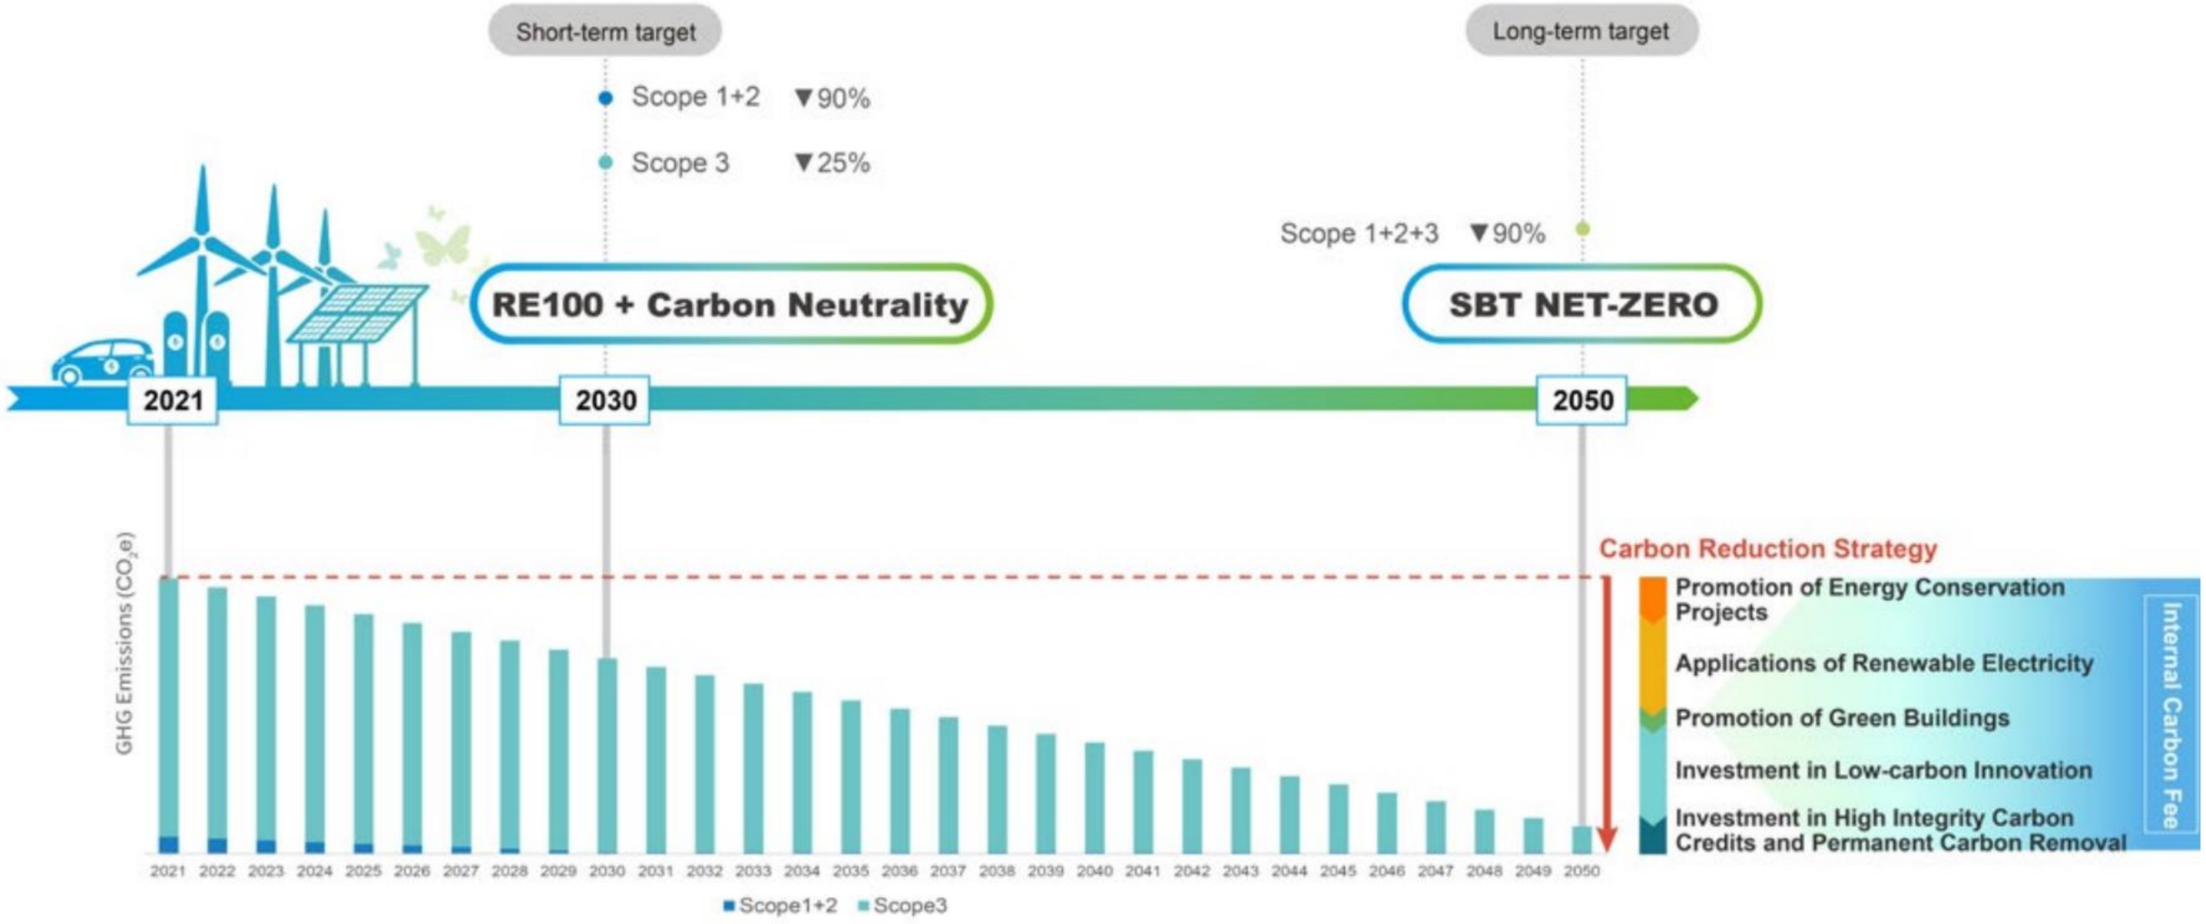


*Percentage of renewable electricity at Delta's global operation sites was 63% in 2022.

CLIMATE GROUP
EV100

- Provide charging facilities at Delta's operations and main production plants within the scope of its global energy management and convert company vehicles to zero-emission vehicles such as pure electric vehicles and hydrogen vehicles by 2030.

Delta’s SBT carbon reduction pathway



Source: [Delta Electronics 2022 ESG Report](#).

Delta’s emission reduction initiatives

- Internal carbon pricing
- Procure renewable electricity
- Energy management and conservation
- Green buildings
- Supplier sustainability management
- Green products
- Circular economy

Internal carbon pricing (ICP)

- Delta has set an internal price of \$300 per ton of CO_2e.
- Carbon fees are collected from Delta’s business groups and units
- Delta’s ICP is used to
  - 1. Support energy conservation and emissions reduction projects
  - 2. Develop and procure renewable energy
  - 3. Invest in negative carbon technologies and low-carbon innovations
- ICP is available for all Delta offices and facilities, including M&A companies.
- Delta has invested more than \$10M in ICP projects in the past two years on battery (ESS), solar and other initiatives.

Procure renewable energy

3 procurement methods:

1. Self-generated solar power	2. Power purchase agreements (PPAs) or green power products from utilities	3. Unbundled energy attribute certificates (EACs) (also called renewable energy certificates (RECs))

In 2022, renewable electricity made up 63% of Delta's electricity.

On track to hit 80% by 2025 and 100% by 2030.

Energy management and conservation

Reducing energy use and improving energy efficiency results in both cost savings and emissions reductions for Delta.

- Delta's production plants have an ISO 50001-certified energy management system.
  - This means Delta has a systematic approach to continuously improving energy performance.
- Delta has 2025 energy utilization targets for its production plants, buildings, and data centers.
- Delta's energy conservation projects have targeted process improvements, air conditioning and ventilation systems, air compressors, injection molding machines, and lighting.

2011

2022

309 energy conservation projects saved approximately **41,126** thousand kWh of electricity

Delta implemented a total of **2,826** energy saving projects

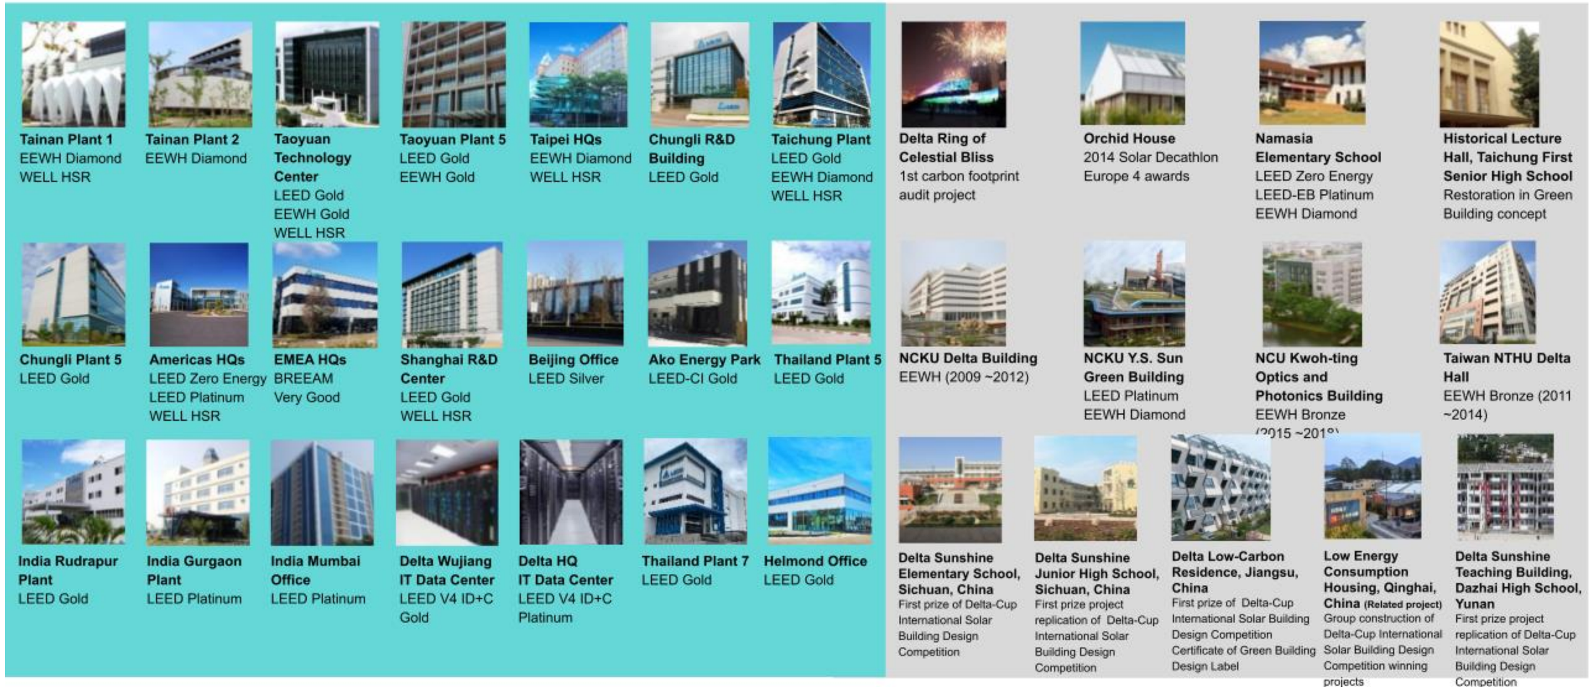
355,330 thousand kWh of electricity saved

Reduction of **276,766** metric tons CO_2e

Green buildings

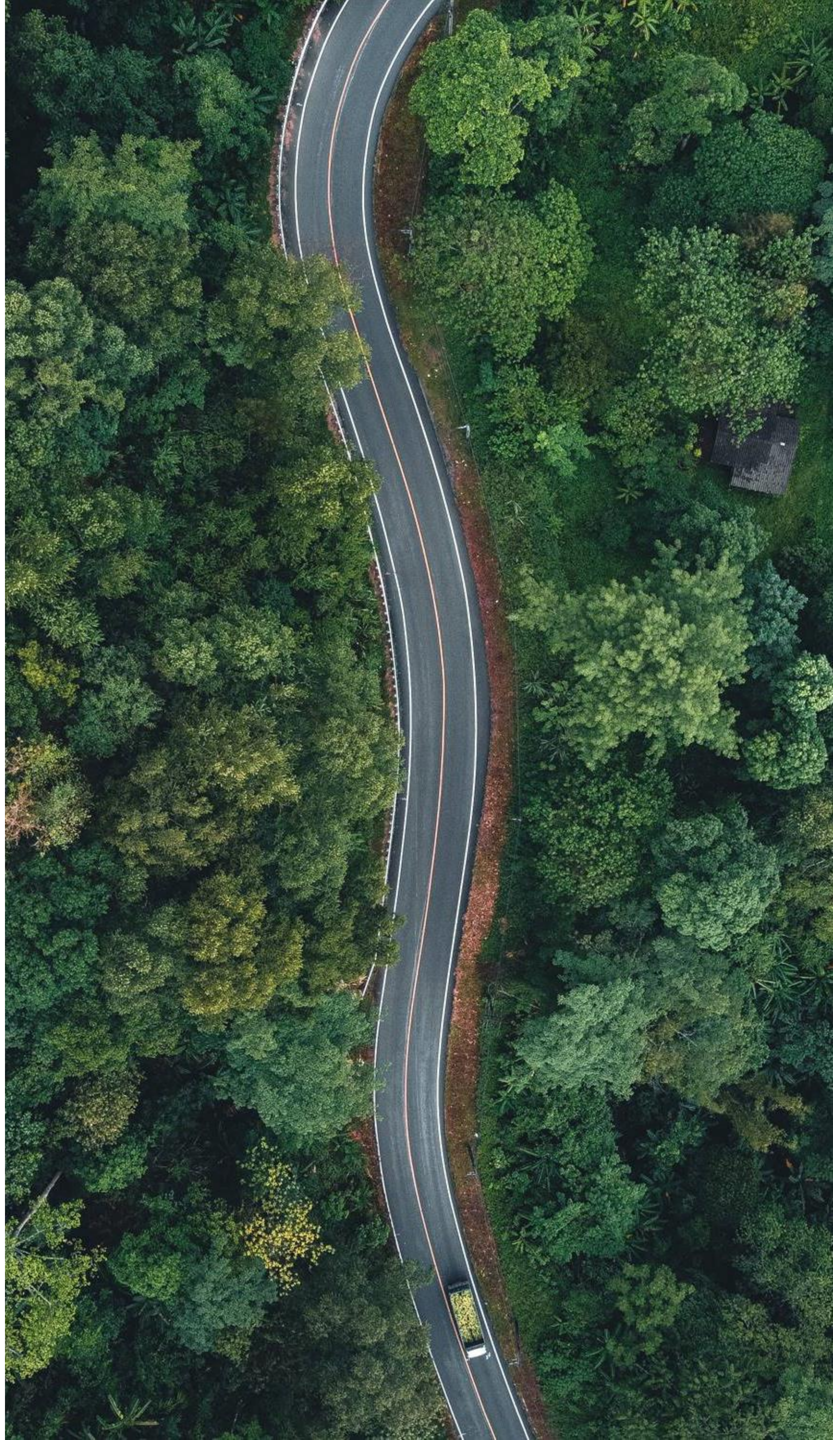
Since 2006, all new Delta plants and offices have incorporated green building concepts.

- Green buildings are designed to reduce negative impacts on human health and the natural environment by efficiently using resources and reducing waste and pollution.
- Delta has buildings certified by
  - US Green Building Council (LEED)
  - the UK Building Research Establishment (BRE), BREEAM,
  - Ecology, Energy-Saving, Waste Reduction, and Health (EEWH) system in Taiwan,
  - the Green Building Evaluation Standards in China.
- To date, Delta has built or donated 32 green buildings and two green data centers.

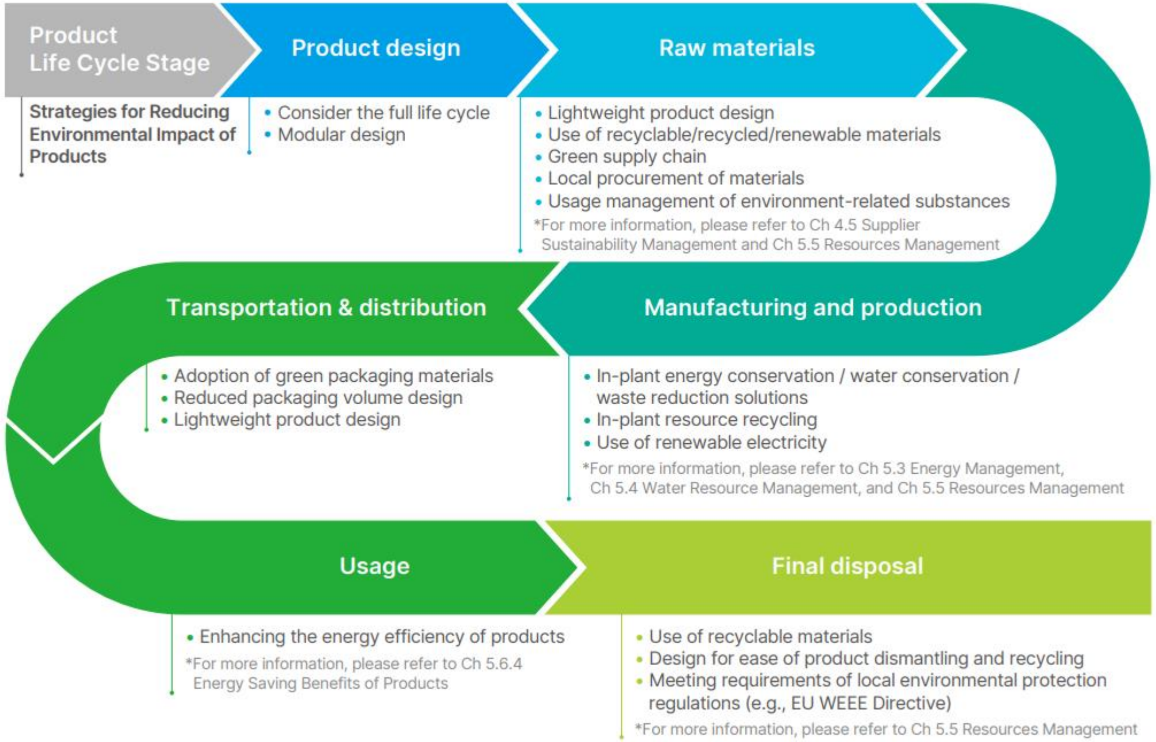


Supplier sustainability management

- Reducing supplier emissions helps reduce Delta's scope 3 category 1 emissions
- Supply chain ESG committee – responsible for integrating sustainability management into procurement systems
- Supply Chain Sustainability Partnership Program started in 2021
  - Targets long-term suppliers to explore energy-saving opportunities
- Starting in 2021, encouraged all suppliers to share information on their GHGs and renewable electricity usage
- Currently requesting all suppliers to obtain third-party verification statement for their GHG data by the end of 2025



Green products & circular economy



- Delta strives to continuously improve the environmental impact of its products across their life cycle.
- Life cycle assessment (LCA) is used to calculate product carbon footprints
- Delta continues to enhance product energy efficiency and to develop integrated green energy products, energy-saving products and solutions, which help clients conserve more energy and achieve even higher cost-effective performance.
- Product Carbon Footprint will be a training topic this year within Delta to further discuss LCA.

Questions?

FAQ Discussion

Does Delta disclose its GHG emissions?

Short Answer: Yes, Delta reports emissions to CDP and in its annual ESG report. Customers can make a free account on the CDP website and download Delta’s response.

Additional Talking Points:

- Delta has set science-based targets. It’s committed to net zero emissions by 2050.
  - By 2030, Delta is committed to reduce its scope 1 and 2 emissions 90% and scope 3 emissions 25% from a 2021 base year.
- Renewable energy target – Delta has a RE100 goal to source 100% renewable energy by 2030.
- Emissions reduction activities: internal carbon price, energy conservation, green buildings

Does Delta have GHG reduction targets? Are they Science-Based Targets?

Short Answer: Yes, Delta has set science-based targets. Delta has committed to reach net zero emissions by 2050. By 2030, Delta is committed to reduce its scope 1 and 2 emissions 90% and scope 3 emissions 25% from a 2021 base year.

Additional Talking Points:

- Renewable energy target – Delta has a RE100 goal to source 100% renewable energy by 2030.
- Emissions reduction activities: internal carbon price, energy conservation, green buildings

How is Delta reducing its GHG emissions?

Short Answer: Delta is implementing a variety of strategies to reduce its GHG emissions including using an internal carbon price, procuring renewable energy, improving energy efficiency, investing in green buildings, and continuously improving its products.

Additional Talking Points:

- Provide detail on each of the reduction strategies.
- Delta has set science-based targets. It’s committed to net zero emissions by 2050.
    - By 2030, Delta is committed to reduce its scope 1 and 2 emissions 90% and scope 3 emissions 25% from a 2021 base year.

Does Delta manage its carbon footprint?

It isn't clear if the customer is referring to Delta's corporate GHG inventory or a product carbon footprint. This response covers both possibilities.

Short Answer: Yes, Delta manages its company carbon footprint and its product carbon footprints. Delta reports emissions to CDP and in its annual ESG report. Delta also has product carbon footprints for 11 of its products and is working to develop more.

Later this summer, there will be a training about product carbon footprints.

Additional Talking Points:

- Emissions reduction activities: internal carbon price, energy conservation, green buildings
- Delta has set science-based targets. It's committed to net zero emissions by 2050.
    - By 2030, Delta is committed to reduce its scope 1 and 2 emissions 90% and scope 3 emissions 25% from a 2021 base year.
- Renewable energy target – Delta has a RE100 goal to source 100% renewable energy by 2030.

Additional Questions

- What questions have you received from customers?

Closing

Through this training, we hope you've learned…

- What GHGs are and why they're important
- The basics of a GHG inventory
  - Scopes, GWPs, Boundaries
- What is Delta's GHG inventory
- Delta's climate targets
- How Delta is reducing its GHG emissions
